Installing Non-App Store Apps: Mac OS X 10.8, Mountain Lion

1. Open System Preferences by going to the Apple menu and clicking on System Preferences.

2. In System Preferences, go to Security & Privacy.

3. In Security & Privacy, click the Padlock in the lower left corner and authenticate with your administrative credentials.

4. Once you have authenticated, change the selection under Allow applications downloaded from: from Mac App Store to Anywhere. You will then receive another popup window wanting you to confirm this. Select Allow From Anywhere. You will now be able to install apps from any developer.
