

eDocs: Using Web Folders in Firefox

By default, the Firefox web browser does not use the WebDAV protocol that is required to use the Web Folder feature in eDocs. There are a couple of ways to add this functionality, but this is the easiest.

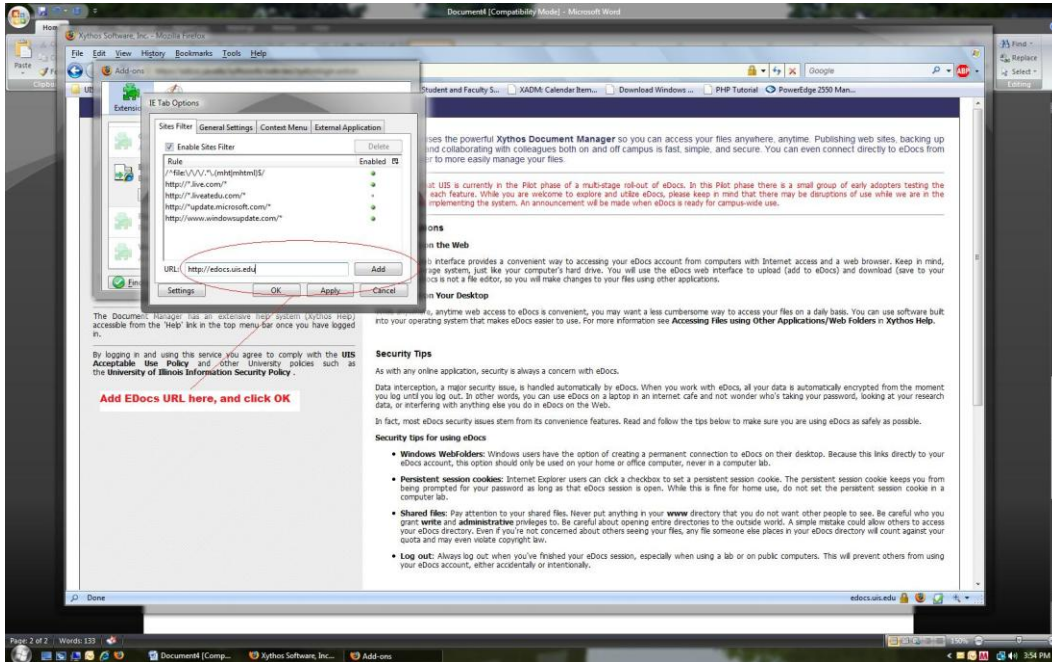

A simple add-on extension will solve this problem. It is called IE Tab. You can get this extension on Mozilla's Firefox add-on site. <https://addons.mozilla.org/en-US/firefox/addon/1419>

Once the extension is installed, Firefox must restart to load it.

To configure IE Tab,

1. Click **Tools**, then **Add-ons** in the browser menu.
2. Find **IE Tab** in the list, and click **Options**.

3. Click **OK** to save the addition. Now every time you go to <http://edocs.uis.edu>, it will open the page in Internet Explorer Mode, and the Web Folder option will be available to use!
