

5 WAYS YOU CAN USE...

A WIKI

1 A wiki is an excellent tool for collaboration. Create a wiki to use as a study guide, and assign each student a different topic to cover.

2 Have students post their weekly notes from class to the wiki to encourage sharing and discussion.

3 Create wikis for each group for a group project. It's an easy way to track completed tasks and those that still need to be finished. Additionally, track participation through assigned each group member a task.

4 Instead of a PowerPoint, have students create a wiki to present to the class and have them navigate through the different areas they've created.

5 Use a wiki as a brainstorm "space" for your students outside the classroom. They can discuss different topics, ideas for projects, etc.

More Ideas for Using Wikis...

- A wiki is a good foundation to share information when writing a research paper. It is a centralized place to collaborate and perform critical peer review.
- Wikis promote negotiation and discussion. They fuel students brains even outside the classroom.
- With wikis, instructors can view the process of a group project and guide students or make edits rather than just viewing the finished version.
- A wiki is a great way to promote an open community that encourages learning and sharing.
